About Runtime Order Management - Oracle

Overview of OSM. OSM is an order processing system that takes as input an order from a customer relationship management (CRM) system, and manages the fulfillment functions that need to be carried out to complete the order. Fulfillment functions include operations such as assigning a phone number, activating a service on the network, shipping a phone, and running billing.

Communications Order and Service

Management Concepts

Order management personnel use the Task Web client and the Order Management Web client to manage orders. Order management tasks include: Completing manual tasks. Most of the tasks required to complete an order are automated. Manual tasks are completed in the Task Web client. An order manager can add comments to the order, attach documents, display the history of the order, and receive notifications about at-risk orders or tasks.

About Tasks and Processes - Oracle

OSM manages the order fulfillment functions that are required to complete an order that is created in a customer relationship management (CRM) system or other order-source system. To run manual tasks by using the OSM Task Web client, an order manager works from a list of manual tasks called a worklist. Tasks are assigned to the worklist by assigning tasks to workgroups. To complete a task, an order manager typically enters data or reviews the data, and clicks a button to indicate that the task is complete.

Order and Service Management Overview - Oracle

This chapter provides an overview of Oracle Communications Order and Service Management (OSM). About OSM. OSM coordinates the order fulfillment functions required to complete a customer order created in a customer relationship management (CRM) system, or other order-source system. As an order management system, OSM receives and recognizes customer orders and coordinates the actions to fulfill the order across provisioning, shipping, inventory, billing, and other fulfillment systems.
