## **Analytical Laboratory**

Analytical chemistry studies and uses instruments and methods used to separate, identify, and quantify matter. In practice, separation, identification or quantification may constitute the entire analysis or be combined with another method. Separation isolates analytes. Qualitative analysis identifies analytes, while quantitative analysis determines the numerical amount or concentration. Analytical chemistry consists of classical, wet chemical methods and modern, instrumental methods. Classical q

In an analytical laboratory, measurements are performed with the purpose of characterizing substances. During the course of this semester you will be performing measurements in order to determine the amount of a species in a given sample. In most cases, we know the presence of the species of interest because of a prior analytical measurement. In this laboratory course, you will put in practice several analytical techniques for quantitative chemical analysis.
